LIFE//LEVEL

CYBERPUNK 3D · 26 VISUAL REFERENCES · 26 PROMPTS

Game art direction · 3D characters · Build/Buy Mode · RPG & UI · AI Butler

FINAL EDITION | CYBERPUNK STYLE LOCK | FULL 3D CHARACTER CUSTOMIZATION | FASHION SHOP

HƯỚNG DẪN SỬ DỤNG VỚI CODEX

- Đây là bộ concept tham chiếu 26 màn hình/hạng mục; mỗi trang có 01 ảnh minh họa và 01 prompt tiếng Anh đầy đủ.
- Ảnh minh họa được dựng lại theo cùng brief (không phải file gốc của các thumbnail tìm kiếm ở tin nhắn trước).
- Ảnh concept không phải model 3D, không phải giao diện chạy được; Codex phải triển khai geometry, assets, React UI và logic thật.
- Không copy nguyên văn chữ sai trong ảnh AI. Các nhãn chức năng và dữ liệu phải lấy từ đặc tả/prompt, không dựa vào chữ trong hình.
- Ưu tiên đồng bộ art direction: dark navy, graphite, cyan có kiểm soát, violet/magenta có điểm nhấn, cyberpunk 3D stylized.
- Không được lấy ảnh làm background thay cho 3D. Build Mode phải có tường, ô sàn, cửa và cửa sổ thực sự có thể sửa và lưu.

01 Khóa chặt style Cyberpunk

Non-negotiable art direction across ALL 26 original references.

NEON HAVEN / PREMIUM STYLIZED CYBERPUNK 3D

#080D18	#10192C	#32E6F4	#9067FF	#EE5ACB	#FFBC62	#EDF4FF

LOCKED ART DIRECTION / ENFORCE GLOBALLY

GLOBAL STYLE LOCK — copy these constraints into every design and coding task:
Premium stylized cyberpunk 3D, futuristic high-rise residences, dark titanium, premium techwear, matte charcoal, navy, layered glass, restrained cyan/violet/magenta emissive accents, believable furniture scale, cinematic warm/cool lighting. UI remains a coherent high-end science-fiction game HUD — including finance, tasks, building editor, character creator, inventory, shops, AI and onboarding.

Forbidden style drift: generic SaaS dashboards; flat unstyled forms; realistic modern-day casual UI; Roblox/blocky character art; 2D pixel art; cartoon/anime mismatch; medieval fantasy costume; excessive rainbow glow; random asset palettes; plain default browser controls; different graphic styles per module.

Safe customization: allow controlled cyberpunk color variants, hairstyles, faces, wearable items and interiors WITHOUT leaving the shared cyberpunk art universe. Finance can be calmer and more readable, but must still match the same tokens, typography, framing and navigation.

02 Kiểm soát đồng nhất đồ họa

Codex must enforce a visual contract, not merely use a color theme.

ART CONSISTENCY CONTRACT

Scene / architecture
Stylized physically coherent 3D; modular floors and wall openings; reusable materials; purposeful signage; believable proportions; constrained isometric camera; cozy warm interiors against blue/purple city lighting.

Character / animation
One consistent body rig and asset scale; clothes fit the same character; same face, hair and outfit visible in character creator, home, equipment, wardrobe, boss and relevant overlays. No silhouette replacements between screens.

Game UI
Shared components for navigation, inventory slots, action buttons, iconography, tooltip, typography, focus outlines, rewards and alerts. Neon must highlight meaning, not dominate reading.

Store / economy
Cosmetic style stays cyberpunk; no medieval fantasy jackets or unrelated assets unless redesigned into the world. All shop previews must match the equipped 3D result.

VISUAL ACCEPTANCE CONTRACT

Mandatory visual quality gates
01. Screenshot every affected screen at desktop and mobile viewports.
02. Compare palette, 3D proportions, material scale, typography, HUD density and scene composition to the references.
03. Verify actual 3D and interactive controls, not a static screenshot.
04. Reject obvious placeholders as final assets.
05. Inspect face/body clipping, outfit intersections, hair/headwear collisions, wall collision and camera behavior.
06. Test reduced-motion and low graphics modes.
07. Track deviations and fix before claiming visual acceptance.

Locked style tokens
Colors: #080D18, #10192C, #32E6F4, #9067FF, #EE5ACB, #FFBC62, #EDF4FF.
Any added semantic colors must harmonize with these and remain accessible.

Explicit instruction
Do not silently reinterpret “Cyberpunk” as neon-only styling. The architectural world, avatar, garments, item silhouettes and UI need to share one art direction.

ONE 3D UNIVERSE | ONE DESIGN SYSTEM | NO STYLE DRIFT

01 Nhân vật chính

CHARACTER DESIGN

VISUAL REFERENCE | Concept only, not an exportable 3D model / UI component

DETAILED PROMPT / SELECTABLE ENGLISH TEXT

Create a premium stylized 3D male character for LIFE//LEVEL, a cyberpunk life simulation RPG. Young adult, realistic adult proportions with appealing stylized facial features, short textured black hair, sophisticated black techwear jacket with subtle cyan illuminated seams, charcoal trousers, futuristic sneakers and a wearable wrist device. Full-body front, side, back and three-quarter views of the exact same character. Professional 3D game character model sheet, consistent proportions, detailed clothing construction, clean neutral dark gray studio background, soft studio lighting, optimized game-ready visual language. High-end original game design, no weapons, no text, no watermark. Landscape 16:9.

02 Tùy chỉnh nhân vật

CHARACTER CREATOR

VISUAL REFERENCE | Concept only, not an exportable 3D model / UI component

DETAILED PROMPT / SELECTABLE ENGLISH TEXT

Design a premium cyberpunk 3D RPG character customization screen for LIFE//LEVEL. Large full-body stylized adult character preview in the center, modular hairstyle selection, face customization, skin tones, futuristic casual outfits, jackets, trousers, sneakers and accessories. Left side character customization categories, right side visual customization swatches, beautiful dark navy and titanium game UI with restrained cyan and violet highlights. Cohesive premium science-fiction interface, refined typography placeholders, clear hierarchy, game-ready visual reference, cinematic studio lighting, widescreen 16:9. Original design, not a SaaS dashboard.

03 Tạo nhân vật chi tiết

Hair · eyes · ears · nose · face · body · starting outfits.

3D CUSTOMIZER PROMPT / SELECTABLE TEXT

CHARACTER CREATOR MASTER PROMPT (EN): Build a truly editable 3D character creator, not a static picture. The player controls hair style/length/color; face preset and jaw; eye shape, iris color and eyebrow shape; nose bridge/tip shape; ear shape/size and earrings; lips/mouth; skin tone; optional facial hair, makeup and compatible body presets. The same customizable character must render across all game scenes. Design a cyberpunk avatar preview with switchable head close-up / full-body camera, orbit, zoom, reset, comparison and live updates.

Minimum editable MVP content: 12 hairstyles, 12 hair colors, 6 eye shapes, 8 iris colors, 6 eyebrows, 6 nose shapes, 4 ear shapes, 6 mouth/lip types, 6 face/jaw presets, 12 skin tones, 3 body presets, plus optional beard, tattoos, piercings and cyberware where supported by the model pipeline.

Behavior: Changing an appearance control must visibly update the 3D mesh, morph target, attached component or material. Do not implement fake sliders that only change numbers or captions. Provide curated presets where high-quality morph targets are unavailable.

04 Tóc, khuôn mặt và outfit ban đầu

Production rules and first-run customization flow.

CHARACTER MESH + INTERACTIONS

3D asset contract
Create a single avatar rig compatible with game locomotion and idle/action animations. Use reusable modular hairstyle meshes with correct scalp placement, eye/skin material variants and facial morph targets where feasible. Anchor eyewear, hats and earrings at consistent attachment points. Meshes need correct pivots and scale.

Face editor
Tabs: Hair, Face, Eyes, Brows, Nose, Ears, Mouth, Skin, Body, Makeup, Accessories and Outfit. Click a facial tab → camera smoothly frames the head; choose a preset or validated slider → immediate 3D update; switch back to full body for clothing. Allow Save, Cancel, Reset and Randomize.

Character persistence
Save a structured appearance configuration server-side, including avatar version/model references, selected morph values or preset IDs and equipped cosmetic item instance IDs. Load it consistently after refresh and on mobile.

INITIAL FREE CLOTHES + RULES

FREE STARTER WARDROBE
On first character creation, grant a starter cosmetic collection ONCE, server-side. Offer at least 3 complete free cyberpunk outfits (Street Runner, Neo-Corporate and Night Technician) with mix-and-match pieces. Suggested free options: 6 tops, 4 bottoms, 4 shoe styles, 3 outerwear pieces and 4 small accessories, compatible with avatar variants.

Starter selection
Preview complete looks and individual layers. Choose a full starter set or create a custom combination from owned free items. Show the exact final 3D look before confirmation. All chosen items must remain owned and can be re-equipped later.

Important boundary
Appearance cosmetics are independent from combat equipment bonuses unless an item explicitly declares both capabilities; do not let wardrobe garments inadvertently alter boss damage. No real-money requirement or external payment for starter customization.

03 Thành phố NEON HAVEN

CITY ENVIRONMENT

VISUAL REFERENCE | Concept only, not an exportable 3D model / UI component

DETAILED PROMPT / SELECTABLE ENGLISH TEXT

Create an original futuristic cyberpunk megacity environment for LIFE//LEVEL called NEON HAVEN. View from a luxury residential tower overlooking a dense futuristic city, layered skyscrapers, elevated rail systems, illuminated streets, holographic advertisements, deep midnight navy atmosphere, restrained cyan, violet and magenta accents, subtle rain and atmospheric haze. Premium stylized 3D game environment with strong readable architectural silhouettes and believable scale. Beautiful cinematic lighting, detailed but optimized-looking assets, sophisticated rather than chaotic. Wide panoramic 16:9 environment concept, no UI, no text, no watermark.

04 Căn hộ khởi đầu

STARTER APARTMENT

VISUAL REFERENCE | Concept only, not an exportable 3D model / UI component

DETAILED PROMPT / SELECTABLE ENGLISH TEXT

Create a beautiful premium stylized 3D isometric starter apartment for LIFE//LEVEL, an original cyberpunk life simulation game. Small but thoughtfully designed customizable apartment with bedroom, compact living area, computer workstation, kitchenette and large futuristic city-facing windows. Modular floor and wall structure, one-meter architectural grid proportions, matte charcoal surfaces, warm interior lighting, controlled cyan accent lights, detailed furniture, soft shadows, carefully composed cozy environment. Orthographic three-quarter isometric camera showing the entire room as a cutaway dollhouse, no roof blocking the view. Clearly separated furniture objects suitable for a real 3D building game. Wide 16:9, no UI, no text.

05 Penthouse cấp cao

ENDGAME PENTHOUSE

VISUAL REFERENCE | Concept only, not an exportable 3D model / UI component

DETAILED PROMPT / SELECTABLE ENGLISH TEXT

Design the ultimate endgame cyberpunk penthouse for LIFE//LEVEL, in the exact same stylized 3D visual universe as a modest starter apartment. Massive multi-room futuristic luxury residence with panoramic city windows, a master bedroom, premium lounge, advanced gaming workstation, AI terminal, weapon display room, crafting workshop, trophy gallery, rooftop garden and collectible decorations. Modular walls, realistic room separation, clear architectural layout, beautiful warm and cool lighting balance, premium futuristic materials, elegant controlled neon. Orthographic isometric dollhouse cutaway view of the entire property, luxurious yet livable, cohesive game-ready asset scale. Landscape 16:9, no UI or text.

06 Build Mode tổng thể

BUILD MODE OVERVIEW

VISUAL REFERENCE | Concept only, not an exportable 3D model / UI component

DETAILED PROMPT / SELECTABLE ENGLISH TEXT

Design a fully featured 3D house construction mode interface for LIFE//LEVEL, a premium cyberpunk life simulation RPG. Inspired by the interaction depth of sophisticated house-building simulation games but with an entirely original visual identity. Large central 3D orthographic isometric construction viewport, partially built futuristic apartment, clearly visible square floor grid, individually editable wall segments, a rectangular room being drawn with a translucent preview, structural placement indicators. Bottom construction toolbar with walls, rooms, floors, doors, windows, stairs, roof, materials and demolition tool icons. Right contextual catalog, top currency and building cost display, undo/redo, confirm and cancel. Premium dark futuristic game UI, restrained cyan and violet highlights. Clean 16:9 desktop screenshot-style concept, readable spatial composition.

07 Bộ block xây dựng

MODULAR BUILDING KIT

VISUAL REFERENCE | Concept only, not an exportable 3D model / UI component

DETAILED PROMPT / SELECTABLE ENGLISH TEXT

Create a professional modular 3D architectural asset kit for a premium stylized cyberpunk building simulation game. Show isolated reusable construction pieces organized in a clean grid: straight wall section, corner wall, half wall, glass wall, wall with doorway, wall with window opening, large panoramic window, sliding door, normal door, floor tiles, ceiling piece, roof panel, pillar, stairs and structural trims. Consistent 1-meter grid compatibility, 3-meter standard wall height, logically aligned pivots, matching thickness and scale, dark titanium and elegant futuristic materials with restrained cyan lighting. Each component clearly separated, three-quarter orthographic asset presentation on a neutral studio background. High-detail but optimized game-ready aesthetic, landscape 16:9.

08 Cửa, cửa sổ và vật liệu

DOORS WINDOWS MATERIALS

VISUAL REFERENCE | Concept only, not an exportable 3D model / UI component

DETAILED PROMPT / SELECTABLE ENGLISH TEXT

Create an original premium cyberpunk architectural catalog art sheet for a 3D building game. Showcase a modular selection of hinged doors, automatic sliding doors, reinforced futuristic doors, glass doors, narrow windows, panoramic smart-glass windows, dark concrete walls, brushed titanium walls, glass partitions, luxury wood flooring, graphite ceramic flooring and illuminated metallic floor panels. Every model uses consistent realistic game scale and clean geometric construction, individual object presentation, subtle material labels represented only as blank caption spaces. Professional stylized 3D PBR asset showcase, soft controlled lighting, clean dark neutral background, organized catalog arrangement, 16:9.

09 Buy Mode - Mua nội thất

BUY MODE

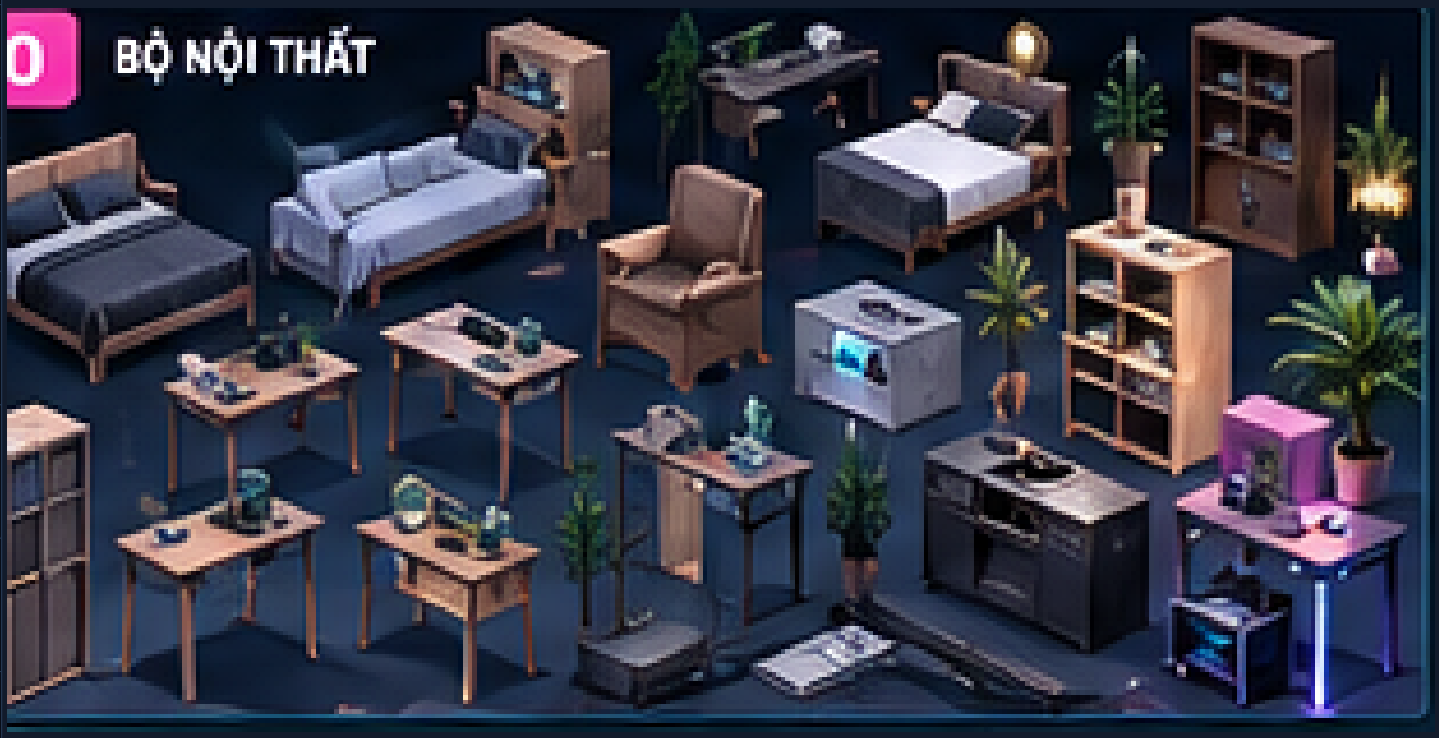

VISUAL REFERENCE | Concept only, not an exportable 3D model / UI component

DETAILED PROMPT / SELECTABLE ENGLISH TEXT

Design a sophisticated Buy Mode interface for LIFE//LEVEL, a premium cyberpunk 3D apartment building game. Large isometric apartment viewport showing a partially furnished room, translucent ghost preview of a futuristic sofa being positioned on a visible floor grid, cyan valid placement outlines and subtle occupied-cell feedback. Bottom furniture catalog with thumbnail cards, category icons, prices in fictional game Gold and owned-item indicators. Contextual side panel showing furniture dimensions, rotation controls and purchase details. Smooth, spacious premium game interface, dark charcoal and navy surfaces, small controlled cyan and violet highlights. The apartment remains the visual focus. 16:9 desktop UI concept, no watermark.

10 Bộ nội thất

FURNITURE ASSET PACK

VISUAL REFERENCE | Concept only, not an exportable 3D model / UI component

DETAILED PROMPT / SELECTABLE ENGLISH TEXT

Create a cohesive premium stylized 3D cyberpunk furniture asset collection for a life simulation game. Display individual modular items including futuristic bed, sofa, lounge chair, coffee table, ergonomic office chair, workstation desk, gaming computer, wardrobe, bookshelf, kitchen counter, refrigerator, dining table, lamp, potted plant, wall display, AI terminal, weapon showcase and crafting bench. Unified real-world-like dimensions, premium dark titanium, textured fabric, warm wooden accents, glass and subtle cyan emissive details. Clean three-quarter orthographic camera, evenly spaced individual assets on neutral background, high-quality original game models, clear silhouettes, optimized WebGL-friendly styling, 16:9.

11 Kho đồ

INVENTORY UI

VISUAL REFERENCE | Concept only, not an exportable 3D model / UI component

DETAILED PROMPT / SELECTABLE ENGLISH TEXT

Design a premium cyberpunk RPG inventory interface for LIFE//LEVEL. A spacious desktop game inventory screen with organized item grid, visually distinct rarity frames, item categories for weapons, armor, accessories, crafting materials, consumables and collectibles. Selected futuristic weapon shows a detailed tooltip with stats, rarity, item level and compare/equip actions. Balance visual hierarchy between inventory grid and item information. Dark brushed metal interface, subtle cyan navigation accents, purple legendary rarity details, crisp readable typography spaces, carefully aligned slots, item icons with consistent three-quarter game art style. High-end original RPG UI, widescreen 16:9, no clutter, no generic SaaS dashboard.

12 Trang bị nhân vật

EQUIPMENT UI

VISUAL REFERENCE | Concept only, not an exportable 3D model / UI component

DETAILED PROMPT / SELECTABLE ENGLISH TEXT

Create a high-end futuristic RPG character equipment screen for LIFE//LEVEL. Center shows the full-body stylized cyberpunk male hero wearing premium black and cyan techwear. Equipment slot frames are arranged naturally around the character: weapon, head, chest, gloves, boots, accessories and relic. Right panel displays attack, defense, critical rate, combat power and detailed equipment comparison with positive and negative stat deltas. Left panel displays level, XP, HP and progression. Premium minimalist dark sci-fi game interface, refined visual hierarchy, subtle holographic detailing, cyan and violet accents, polished game-art presentation, landscape 16:9.

13 Bộ vũ khí RPG

WEAPON ASSET SHEET

VISUAL REFERENCE | Concept only, not an exportable 3D model / UI component

DETAILED PROMPT / SELECTABLE ENGLISH TEXT

Design an original collectible weapon concept sheet for LIFE//LEVEL, a premium cyberpunk 3D RPG. Show eight fictional game weapons progressing from common to mythic rarity: compact training blade, neon-edged katana, plasma saber, advanced energy blade, crystalline sword, heavy technological greatsword, legendary quantum edge and mythic luminous relic. Each weapon has a unique recognizable silhouette, increasing intricate detail and tasteful cyan, purple, amber or crimson glow according to rarity. Show each item isolated at the same scale and three-quarter angle, polished stylized 3D game-ready art, dark neutral presentation background, no character hands, no branding, 16:9.

14 Bộ icon vật phẩm

ITEM ICONS

VISUAL REFERENCE | Concept only, not an exportable 3D model / UI component

DETAILED PROMPT / SELECTABLE ENGLISH TEXT

Create a cohesive game item icon reference sheet for LIFE//LEVEL, premium futuristic cyberpunk RPG. A clean 5-column visual collection featuring helmets, armored jackets, gloves, boots, rings, necklaces, neural chips, tech modules, glowing energy cores, alloy fragments, quantum crystals, upgrade stones, healing consumables, crafting materials and legendary relics. All objects are rendered individually in the same high-quality stylized 3D isometric game icon style, same lighting direction, same scale, distinct silhouettes and rarity accents. Each icon centered inside its own equally sized square cell, neutral dark backdrop. No text or watermark. Landscape 16:9.

15 Chế tạo & nâng cấp

CRAFTING & ENHANCEMENT

VISUAL REFERENCE | Concept only, not an exportable 3D model / UI component

DETAILED PROMPT / SELECTABLE ENGLISH TEXT

Design a premium cyberpunk RPG crafting workshop interface for LIFE//LEVEL. Background shows a detailed futuristic workshop with metal workbench, robotic fabrication equipment and controlled neon lighting. Center features a large three-dimensional holographic preview of an energy sword being upgraded. Left side recipe and crafting category navigation. Right side stats before and after upgrade, required materials, available resources, Gold cost and a prominent enhance button. Bottom shows upgrade materials and blueprint icons. Sophisticated dark metallic game interface, clear visual focus, attractive restrained cyan and violet effects, immersive and functional, widescreen 16:9.

16 Rơi đồ hiếm

LEGENDARY LOOT REVEAL

VISUAL REFERENCE | Concept only, not an exportable 3D model / UI component

DETAILED PROMPT / SELECTABLE ENGLISH TEXT

Create an exciting premium cyberpunk RPG legendary loot reward reveal interface for LIFE//LEVEL. One beautiful legendary plasma blade suspended in the center with controlled golden and violet particles, cinematic dark background, subtle radial lighting and polished item rarity presentation. Supporting rewards underneath include Gold coins, upgrade materials, XP and rare fragments, each displayed as refined 3D item icons. Clear equipment action and inventory action in a balanced game UI layout. Dramatic but sophisticated, no excessive bloom, sharp item silhouette, high-end original game presentation, widescreen 16:9.

17 Thiết kế Boss

STATIC WRAITH BOSS

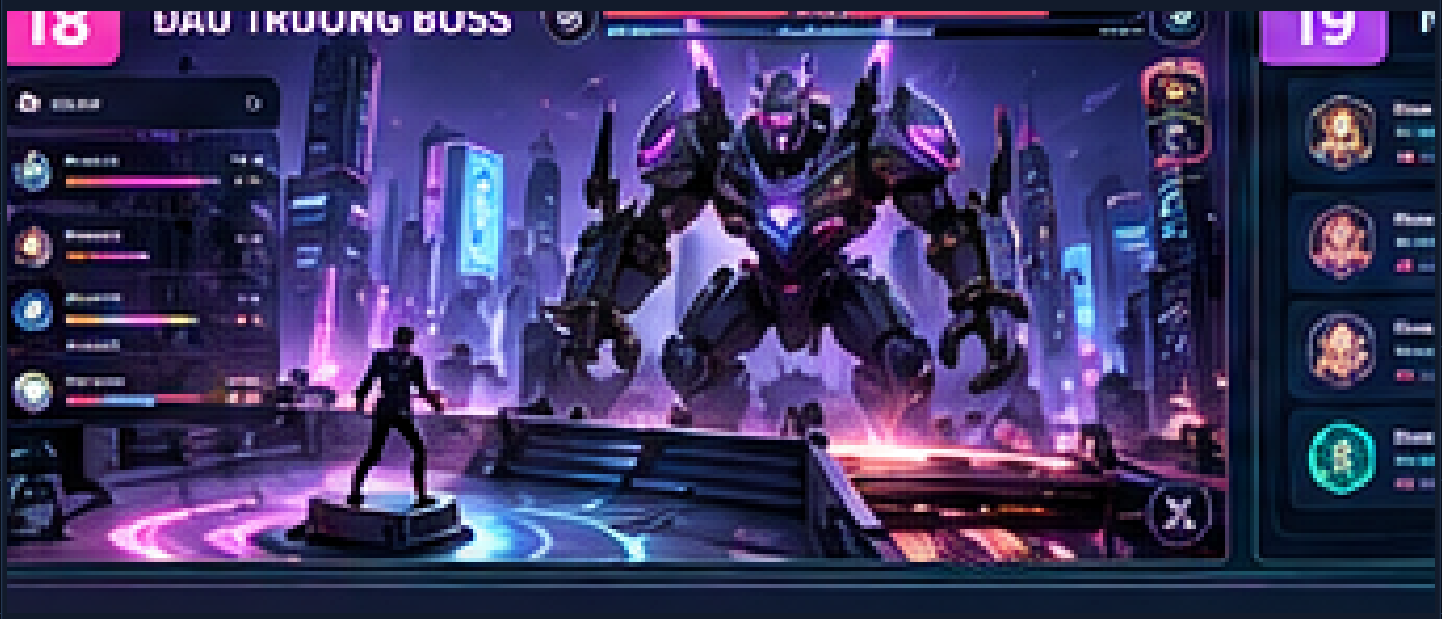

VISUAL REFERENCE | Concept only, not an exportable 3D model / UI component

DETAILED PROMPT / SELECTABLE ENGLISH TEXT

Create an original stylized 3D cyberpunk RPG boss concept for LIFE//LEVEL named STATIC WRAITH. A towering humanoid machine corrupted by unstable violet energy, angular black titanium armor, exposed luminous circuits, intimidating asymmetrical shoulder plates, glowing cyan core and elegant mechanical detailing. Distinctive recognizable silhouette suitable for a browser-based 3D game, detailed but not excessively complex geometry. Full-body front, side, back and three-quarter views plus a close-up of the head. Consistent model proportions and material reference, neutral dark studio backdrop, premium game character art, no text, widescreen 16:9.

18 Đấu trường Boss

BOSS ARENA

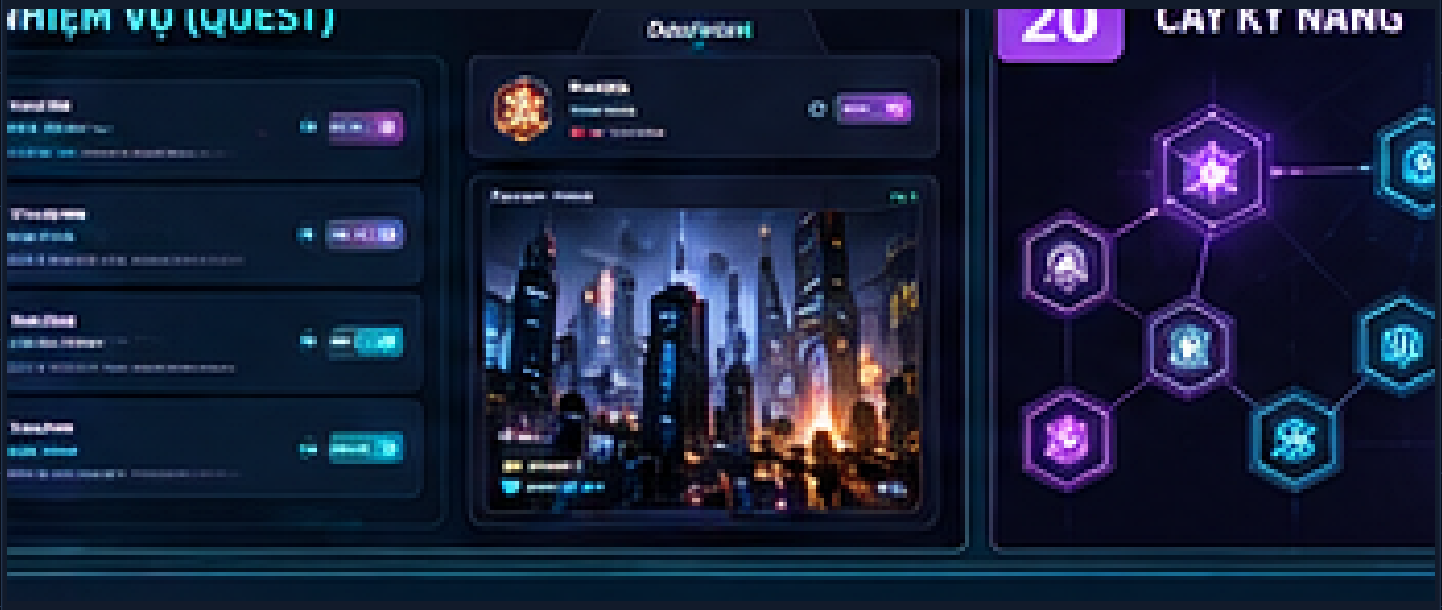

VISUAL REFERENCE | Concept only, not an exportable 3D model / UI component

DETAILED PROMPT / SELECTABLE ENGLISH TEXT

Design a premium cyberpunk RPG boss encounter screen for LIFE//LEVEL. Central visual is a large original robotic boss on a futuristic arena platform overlooking the neon megacity, dynamic but controlled cinematic lighting. A clear boss HP and phase display sits across the upper screen. The player's character is visible at the foreground edge with equipped weapon. Side interface displays linked real-life quests that trigger attacks and damage when completed, combat history, equipment power and potential loot. Combat is task-driven, not button-mashing. Premium immersive 3D browser game design, strong visual hierarchy, restrained HUD, widescreen 16:9.

19 Nhật ký nhiệm vụ

QUEST JOURNAL

VISUAL REFERENCE | Concept only, not an exportable 3D model / UI component

DETAILED PROMPT / SELECTABLE ENGLISH TEXT

Design a beautiful cyberpunk RPG quest journal for LIFE//LEVEL, where real-life productivity tasks appear as immersive RPG missions. Strong game-like interface with three high-priority quests, daily and weekly mission categories, task checklists, difficulty indicators, deadlines, XP/Gold rewards and boss damage previews. Selected mission opens a spacious detailed quest panel. Use premium dark navy surfaces, carefully balanced cyan and violet accents, high-quality iconography, subtle geometric textures and clear readable content hierarchy. No giant generic SaaS cards, no noisy holograms. Desktop 16:9, with space reserved for actual Vietnamese text overlays.

20 Cây kỹ năng

SKILL TREE

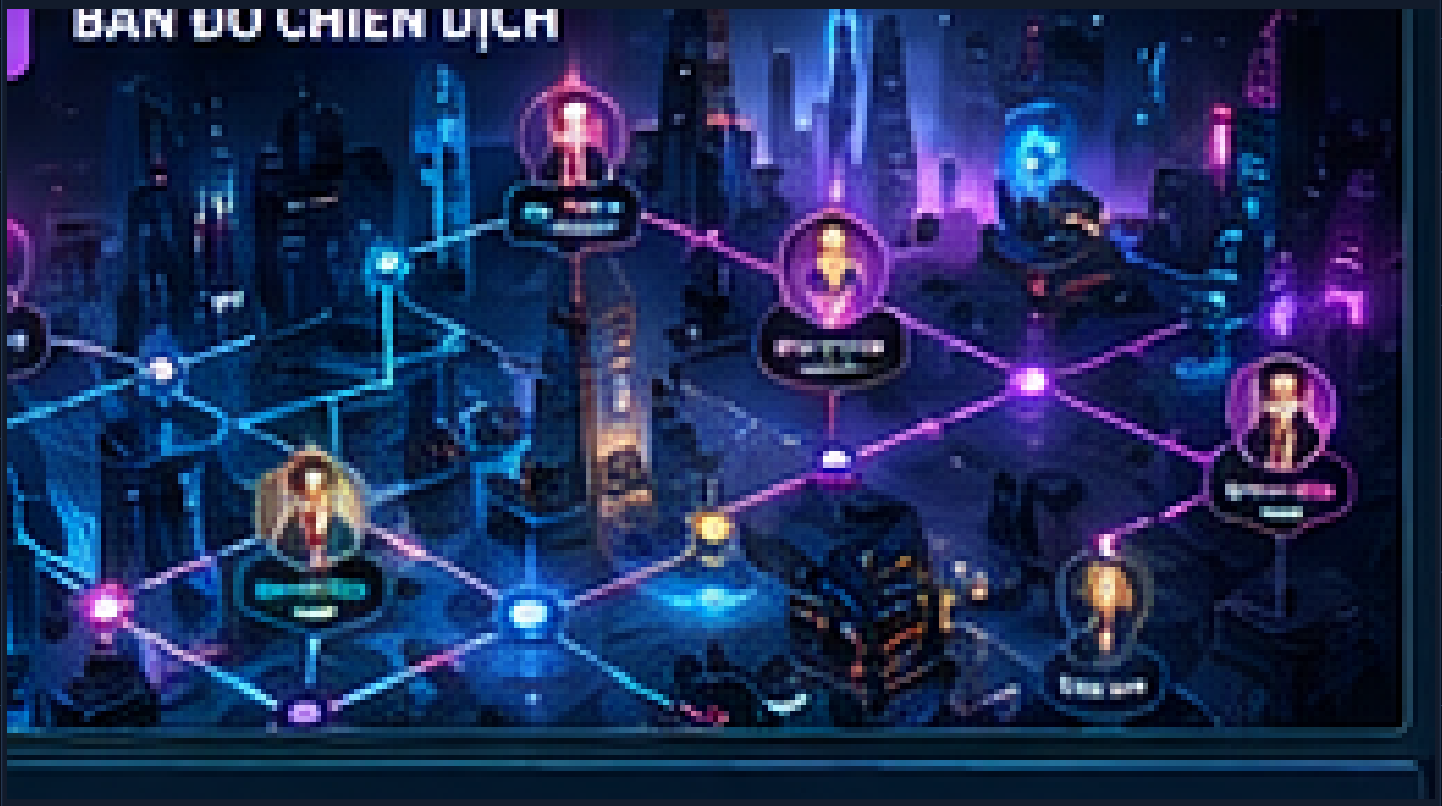

VISUAL REFERENCE | Concept only, not an exportable 3D model / UI component

DETAILED PROMPT / SELECTABLE ENGLISH TEXT

Design a sophisticated RPG skill tree interface for LIFE//LEVEL with six major progression branches: Health, Knowledge, Career, Finance, Relationships and Creativity. Each branch has beautiful distinctive icons and connected skill nodes arranged as a balanced futuristic progression network. Clearly distinguish unlocked, unlockable and locked nodes using restrained cyan, violet, amber and muted gray treatments. Center focus on a selected skill with meaningful detail panel, requirements and progression information. Deep dark cyberpunk visual aesthetic, polished line connections, readable hierarchy and elegant motion-ready layers. Premium original game UI, widescreen 16:9.

21 Bản đồ chiến dịch

CAMPAIGN MAP

VISUAL REFERENCE | Concept only, not an exportable 3D model / UI component

DETAILED PROMPT / SELECTABLE ENGLISH TEXT

Create a premium cyberpunk RPG campaign progression map for LIFE//LEVEL. A beautiful visual journey through futuristic city districts representing life goals, with interconnected mission nodes, chapter gateways, milestone locations and dramatic boss icons. Some paths completed and illuminated in cyan, upcoming paths softly glowing, future regions locked in darkness. Selected campaign detail panel shows meaningful progress, rewards and requirements. A clear hierarchy of campaign, chapter, milestone and boss. Rich atmospheric cyberpunk world-map presentation combined with elegant legible game HUD, widescreen 16:9, no watermark.

22 Màn hình chính

HOME / HUD

VISUAL REFERENCE | Concept only, not an exportable 3D model / UI component

DETAILED PROMPT / SELECTABLE ENGLISH TEXT

Design the definitive LIFE//LEVEL main game screen, a premium cyberpunk 3D life simulation RPG. The central 75 percent of the screen is an interactive-looking isometric luxury apartment with a stylized character walking between furniture. Large, beautiful futuristic city windows, high-quality architectural details, cozy lighting and controlled cyan/violet accents. Compact top HUD for player level, Gold and notifications. Bottom HUD for HP, Energy, Mood and XP. Small contextual active boss widget and a compact three-priority quest panel. Collapsible minimal navigation instead of a huge sidebar. Gameplay world dominates the composition. Premium commercial game presentation, immersive, practical and uncluttered. Desktop widescreen 16:9.

23 Tài chính cá nhân

FINANCE

VISUAL REFERENCE | Concept only, not an exportable 3D model / UI component

DETAILED PROMPT / SELECTABLE ENGLISH TEXT

Design an elegant premium futuristic personal banking screen integrated into LIFE//LEVEL, a cyberpunk life simulation game. Sophisticated financial interface with real-money account balances, cashflow visualization, expense categories, monthly spending, budgets, savings goals, transactions and recurring payments. Dark graphite, midnight blue, muted cyan and subtle metallic accents. Professional bank-grade readability and refined typography, controlled use of glass surfaces, no excessive glow. A unique cyberpunk-inspired financial interface that feels trustworthy and useful, not a generic dashboard. Real money must be visually separate from fictional game Gold. Desktop widescreen 16:9.

24 AI quản gia

AI BUTLER

VISUAL REFERENCE | Concept only, not an exportable 3D model / UI component

DETAILED PROMPT / SELECTABLE ENGLISH TEXT

Design an original premium cyberpunk AI Butler interface for LIFE//LEVEL. A sophisticated futuristic personal assistant terminal with an elegant small holographic assistant identity on one side, readable conversational interface in the center and structured planning proposals on the other side. AI can break down life goals, suggest tasks, organize schedules and identify overload. Include proposal preview cards, visual change comparisons, approve/reject actions and permission indicators. High-quality dark glass and brushed titanium surfaces, controlled cyan and violet lighting, luxurious yet calm. Usable application UI integrated into an immersive game universe, desktop 16:9, no clutter.

25 Thú cưng

PETS

VISUAL REFERENCE | Concept only, not an exportable 3D model / UI component

DETAILED PROMPT / SELECTABLE ENGLISH TEXT

Create a premium stylized 3D cyberpunk companion pet collection concept for LIFE//LEVEL. Five original friendly companion designs: a compact robotic cat, small cybernetic dog, floating drone pet, luminous mechanical fox and rare crystalline technology creature. Charming personalities, polished game-ready stylized forms, coherent scale for a luxury cyberpunk apartment, dark metallic shells, soft cyan and violet illumination, subtle animated-feature-like appeal without looking childish. Show each pet separately at a three-quarter view, with consistent lighting and proportions on neutral dark studio background. Original character designs, landscape 16:9, no text.

26 Cửa hàng tổng hợp

RPG STORE

VISUAL REFERENCE | Concept only, not an exportable 3D model / UI component

DETAILED PROMPT / SELECTABLE ENGLISH TEXT

Design a premium futuristic RPG marketplace screen for LIFE//LEVEL, cyberpunk life simulation game. A visually rich but clearly organized virtual store featuring weapons, armor, crafting materials, furniture, pets and cosmetics. Distinctive navigation categories, large featured item showcase, attractive item cards with rarity borders, fictional Gold prices, owned states and purchase actions. The selected item appears in a large high-quality 3D preview with detailed stats and description. Sophisticated titanium-black background, deep navy layered surfaces, restrained cyan, violet and amber accents. Looks like a polished game marketplace, not an ecommerce website. Widescreen 16:9.

05 Mua quần áo bằng Gold

Personal fashion progression must be visible on the character and in the apartment.

FASHION STORE PROMPT / SELECTABLE TEXT

WARDROBE & FASHION SHOP MASTER PROMPT (EN): Build a premium cyberpunk 3D clothing store and personal wardrobe with a large live full-body avatar preview, clothing categories, curated cyberpunk outfit collections, item rarity, ownership tags, Gold prices, 3D color variants, before/after appearance comparison, filters and purchase confirmation. New purchases unlock wearable items permanently and can be mixed with starter pieces. Display the exact equipped result on the player avatar in the home apartment, profile, creator, and other relevant game scenes.

Catalog: hairstyles, techwear jackets, coats, hoodies, tops, trousers, shoes, gloves, masks, eyewear, hats, piercings, backpacks, cyberware cosmetics, jewelry and seasonal neon-themed collections. Offer complete outfits and individual slots; prevent invalid layer combinations and clipping. Both starter and earned items appear in one unified owned wardrobe.

Purchasing: Preview item without charge → show price and current Gold → server validates ownership, unlock and funds → debit game Gold atomically → grant item once → persist ownership → offer “Equip now” → immediately update the same 3D character.

06 Kết nối shop, tủ đồ và tiến trình

No hardcoded item grants, no client-trusted balances, no outfit desynchronization.

SERVER & AVATAR CONTRACT

Ownership and unlocks
Use a catalog of cosmetic definitions + per-user owned item instances/entitlements. Make starter item grants idempotent. Award optional cosmetic items from campaigns, bosses, achievements and game Gold shops. No real-money transactions. Store appearance history only if useful, and never grant purchases merely from UI state.

Wearable compatibility
Slots: Hair, Headwear, Face/Eyes, Earrings, Top, Outerwear, Bottoms, Shoes, Gloves, Back, Cyberware and optional Full Outfit. Define mesh compatibility and priority for clipping prevention. Full outfits may lock some slots; disclose this before equipping.

Persistence
Transactions: wallet ledger + cosmetic ownership + event log. Each equipped item must be owned, available and compatible. Protect purchase/equip/undo from two simultaneous tabs and network retries.

ACCEPTANCE TESTS

Must-pass QA cases
01 Create avatar, customize eye/nose/ear/hair independently; visibly confirm changes.
02 Pick a free starter outfit; no Gold is deducted.
03 Reload and verify every face setting and outfit layer persist.
04 Buy one jacket with game Gold; exact debit, one grant.
05 Try duplicate purchase/retry and concurrent tabs; no duplicate debit or grants.
06 Equip new jacket; verify in wardrobe, 3D home and character view.
07 Remove jacket/re-equip original outfit; original owned inventory remains.
08 Insufficient Gold or locked item does not unlock.
09 Changing clothing does not alter finance balance or combat stats accidentally.
10 Verify headwear/hair, face masks, shoes, arm joints and animations do not clip badly.
11 Verify desktop, mobile, low-graphics and reloaded sessions.

CODEX — IMPLEMENTATION DIRECTIVE

01 Analyze all 26 references and prompts. Treat images as visual guidance, not finished implementation.

02 Use the existing LIFE//LEVEL repository and maintain all game systems and current user data.

03 Build a real interactive 3D apartment and The Sims-style house editor: walls, floors, doors, windows, rooms, grid and Buy Mode.

04 Implement each UI as responsive React components with valid navigation, state, APIs and visual consistency.

05 Use shared art direction, scales, materials, colors, iconography and character identity across screens.

06 If sub-agent delegation is available, distribute independent work to UI, World, Building, RPG/Assets, AI and QA agents.

07 Set file ownership, interface contracts and test gates; parallelize only genuinely independent work.

08 After each milestone run build, typecheck, tests, visual preview and performance checks; fix regressions before proceeding.

09 Do not fake production features with screenshots, decorative buttons or client-generated currency/loot.

10 Preview requests during development are not design approval. Continue the master plan until verified or transparently blocked.

07 Lệnh bổ sung bắt buộc cho Codex

Integrate into existing plan; spawn agents when the runtime supports it.

STRICT INSTRUCTION / SELECTABLE TEXT

IMPLEMENTATION DIRECTIVE: Preserve the existing 26 original image references and prompts. The rules in these seven supplementary pages take precedence where a reference is ambiguous, especially for cyberpunk consistency, facial customization and starting/future clothing. Do not substitute a static screenshot for an editable 3D avatar or a working shop. Do not overwrite working quest, boss, apartment, finance or Muse/AI systems.

Multi-agent delegation: If Codex supports real subagents, launch independent agents with explicit file ownership and test contracts: (A) cyberpunk design system/visual QA, (B) character rig + facial customization, (C) starter wardrobe + wearables, (D) cosmetic shop + server economy, (E) cross-screen integration + regression tests. Coordinate shared data contracts before parallel edits; integrate the results after each wave. Do not claim to have spawned agents if unavailable.

Suggested plan: repo audit → visual/style inventory → avatar data contract → facial controls and actual mesh responses → free starter outfits → saved avatar → wardrobe UI → Gold-powered fashion shop → item ownership → world/profile synchronization → UI and 3D QA → production build and persistence tests.

Required report: implemented/verified/not-yet-verified/blocked status for each facial option, starter outfit, clothing category, purchase, equip, persistence, cyberpunk visual check and FPS test. Include screenshots when a browser exists. Do not mark final “done” based solely on successful compilation.

NON-NEGOTIABLE CHECKPOINT

Minimum acceptance: editable hair + face + eyes + nose + ears + mouth + skin; 3 free cyberpunk starter outfits; Gold-funded purchase of additional clothing; inventory ownership and live equip; 3D avatar appearance persistence across relevant screens; no style drift from premium cyberpunk; QA tests pass. Preview rule: If the user asks to run the application while work continues, treat it only as an interim preview — not approval or completion.
